

What's in our Cream Pops | Gel Creams?

A solid gel cream polish with a thick, easy-to-control texture. Cures under a UV/LED lamp.

Ingredients

Acrylates Copolymer · Hydroxypropyl Methacrylate · Silica · Trimethylbenzoyl Diphenylphosphine Oxide · Dimethicone

May contain: Titanium Dioxide (CI 77891), Iron Oxides (CI 77491, CI 77492), Ultramarines (CI 77007), Carbon Black (CI 77266)

Key ingredients

Acrylates Copolymer

Forms the strong, flexible base film that gives each layer its durability and glossy, chip-resistant finish.

Hydroxypropyl Methacrylate

Helps each layer bond to the one beneath it and to your base coat.

Silica

Gives the cream its body and soft, controllable consistency.

Trimethylbenzoyl Diphenylphosphine Oxide

The light-activated curing agent that hardens the gel and locks in the colour.

Dimethicone

A lightweight silicone that adds slip and helps prevent streaking.

Colourants

Cosmetic-grade pigments that create each shade.

Free from

HEMA-free

Storage

Keep the cap closed, below 26°C and out of direct sunlight – natural light can start curing the gel.

Good to know

- Like most gel products, this contains acrylates, which can cause an allergic reaction in some people. If you've reacted to gel or acrylic products before, patch test first.
- Keep uncured gel off your skin. If it touches skin, wipe it away straight away with an alcohol wipe.
- Cure every layer fully. Thin, even layers cure better and last longer.
- Avoid contact with your eyes. If contact happens, rinse well with water.
- For external use only. Do not swallow. Keep out of reach of children.

Cruelty-free. Our manufacturers don't test on animals at any stage of product development.
